

FOUNDING COHORT · SUMMER 2026

Help your teen launch a real venture — with operators behind them.

A parent concept brief.

SECTION 01

What we're worried about, honestly

The conversation parents are having in 2026 is not whether your teen gets into college. It's what happens after.

MIT researcher Andrew McAfee warned in [May 2026](#) that automating entry-level jobs doesn't just affect this generation's first paycheck — it collapses the talent pipeline companies will need a decade from now. Forbes has reported the 2026 entry-level hiring crisis as a confluence of AI anxiety, ghost job postings, and experience requirements that most new graduates simply cannot meet.

A survey of college seniors puts numbers on the anxiety: 75 percent cite reduced entry-level hiring as their single biggest concern. 58 percent say they need deeper AI fluency to compete. And 58 percent say they are open to starting something of their own — if someone would show them how.

We are not saying college is broken. We are saying that a degree, on its own, is no longer sufficient proof of readiness. The window to build that proof is now, while your teen still has time and low financial stakes to experiment.

SECTION 02

What we're proposing

Precision Launch Academy is a six-week summer cohort plus 90 days of post-launch support that helps your teen launch one real, AI-assisted venture they own at the end. Online by default, with optional in-person sessions for Austin-area families.

The output is not a slide deck or a competition trophy. It is a live business — domain, brand, a real landing page, real outreach, and at least one documented attempt to convert a real customer. That is a portfolio signal. It is also, frankly, a confidence signal that no grade can replicate.

Programs like NFTE's Make AI Your Cofounder curriculum, Nova School AI's teen entrepreneurship cohorts, and Babson's Summer Venture Program have proven the category. Precision Launch Academy differs in two important ways: parents are co-pilots here, not spectators — and we stay with the family for 90 days after launch, the stage where most teen ventures quietly die.

SECTION 03

What your teen actually does in six weeks

- Week 1 — Problem discovery. Written problem statement plus five real interviews, synthesized with ChatGPT or Claude.
- Week 2 — Idea selection and positioning. A one-page idea brief: problem, solution, target customer, one-sentence positioning, alternatives review.
- Week 3 — Build the landing page. A live, publicly accessible page built with Lovable, Bolt, or v0. Parent signs off before launch.
- Week 4 — First outreach and price testing. Five outreach messages sent to non-family prospects; three documented price-test conversations.
- Week 5 — First sale or pre-order. A documented sale, pre-order, or a clear-eyed close-attempt log explaining what would need to change for a yes.
- Week 6 — Public launch and parent showcase. Live venture in public. Portfolio package: domain, brand assets, deliverable log, retrospective. Three-minute parent showcase.

Then 90 days of post-launch support: bi-weekly operator office hours, customer-traction review, IP and trademark guidance, early-stage defensibility checks, and founder-level introductions through the Precision AI Ventures network.

Every venture is built under a participation agreement that covers IP, ownership, and confidentiality from day one. Teens are explicitly taught the categories of work they cannot do without licensed adults — legal, financial, medical advice. Workload is capped at four to six hours a week. School comes first. Always.

SECTION 04

What you (the parent) actually do

- Read a one-page weekly brief: what your teen built, what they struggled with, and three questions worth asking them at dinner.
- Attend one 30-minute parent check-in at the midpoint of the cohort.
- Sign the participation agreement before anything starts.
- Review the landing page before it goes public, and the parent showcase at the end.
- Stay available — not as the project manager, but as the adult who knows when to push and when to let them figure it out.

You do not need a business background. You need to be curious and willing to take it seriously alongside them. Roughly 60 to 90 minutes a week.

SECTION 05

The economics, plainly

The founding cohort is application-only and free for the families we accept. We want the right teens, not the ones whose parents could write the largest check. Future cohorts will carry a summer-camp-scale program fee.

After launch, we participate in success: a small revenue share on the venture if and only if it earns. No earnings? No share. We do not take equity in your teen's company — your teen owns the business, the brand, and the IP. Precision AI Ventures participates only when the venture actually generates revenue. Specific revenue-share terms are confirmed in the discovery conversation and in the participation agreement.

This is deliberate. Adult venture studios take 30 to 60 percent equity in exchange for infrastructure. We chose not to. Your teen is a junior founder, not a passive cap-table line. Aligning on revenue share — only on success — keeps them in full ownership and keeps us motivated to help them earn.

SECTION 06

What we explicitly will not promise

- No earnings guarantees. Some teens in similar programs generate early revenue; many do not. The experience of trying — and documenting it well — is the point.
- No college replacement. This program assumes your teen is on a college track. It is designed to make that track stronger, not shorter.
- No passive income fantasy. There is no magic prompt that generates a business. This requires real work.

- No school marketing channel. This cohort is filled through parent networks only — not PTA emails, not school endorsements.
- No professional advice. If a teen's venture raises questions about taxes, legal structure, or money earned, we flag those questions and point to the right professionals. We do not answer them.
- Not a hand-it-over service. We don't run the venture for your teen. We don't ghostwrite the page. The work is theirs. Operators stand behind them, not in front of them.

SECTION 07

Why us, why now

Precision AI Ventures launches real businesses for a living. We use Precision Frameworks — patent-pending scoring rubrics and launch playbooks — and a deep operator network to take ideas from zero to live customers.

The founder, Peter Giorgiutti, has spent close to two decades inside the work that is now reshaping the entry-level market: selling and operating AI and automation across enterprise software, state and county governments, and Blackstone-portfolio companies, with adjacent agentic-AI work alongside allied military programs. He still prospects. He still closes. He still sits with management teams. He has seen what good looks like at every layer, and he knows which doors are quietly closing for new graduates. He is also an Austin parent who volunteered extensively at his son's school.

Our first intern is already inside Precision AI Ventures. A high-school-aged intern wrote a paper on a topic he genuinely cares about, and we are turning that paper — through the same scoring, defensibility, and launch playbooks we use on adult ventures — into a real business he will own. The idea is meaningfully larger than what he could have imagined alone, not because we replaced his thinking, but because the operator team around him expanded what was possible. That is the case study Precision Launch Academy is built to repeat for other families.

If your teen has something they care about, something they are passionate about, something they are good at — that is the raw material. We bring the rest.

SECTION 08

Founding cohort details

COHORT SIZE	8 to 12 families
FORMAT	Online by default; Austin-area meetups optional

WHO QUALIFIES	Teens in grades 10–12, or first-year college students
COHORT DATES	June–July 2026; 90-day post-launch support runs August–October
FOUNDING COHORT FEE	Free for accepted families · application-only
SUCCESS SHARE	Small revenue share on the venture, only if it earns
COMMITMENT	Parental consent required; participation agreement signed before week one

SECTION 09

How to apply

The founding cohort is application-only. This is not an enrollment form — it is an invitation to a 20-minute conversation to see if this is a fit for your family.

If any part of this brief reflects a concern you already have — about your teen's readiness, about the job market they are heading into, about what AI fluency actually means in practice — that conversation is worth having.

precision-ai-ventures@proton.me

In your first message, tell us briefly: your teen's name, grade, what they care about, and why now.

This brief is for informational purposes only. Precision Launch Academy is a program of Precision AI Ventures and is in pilot phase. Nothing in this document constitutes a guarantee of income, employment, or college admission outcome. Program participation is voluntary. Parental consent is required for all minor participants. Specific program economics are confirmed in the discovery conversation.
